The professional welder's choice.

Designed with the professional in mind, the Big Blue 700X Duo Pro is the best for arc performance, ease of use and reliability. Ideal for dual-operator applications on labor intensive jobsites, or jobsites with limited space.

Heavy-duty low-speed industrial diesel engine

is designed to operate over 10,000 hours before the first basic overhaul. Backed by worldwide support and service.

Double the amperage output.

Parallel switch combines both independent outputs to a single side. This provides a safe and easy way to run large electrodes, stud weld or carbon arc gouge.

**56.7°C
RATED**

Designed to excel in extreme temperatures. See page 2.

Parameter control at the wire feeder or pendant without needing a control cord. See pages 2 and 3.

Increased efficiency. More arcs and better fuel economy equal increased profits for your business. Estimated savings are 34 percent with a dual-operator unit versus two single-operator units.

Thermal overload protection prevents machine damage if duty cycle is exceeded or airflow is blocked.

Independent generators provide the flexibility, dependability and reliability you need to get the job done right. Power is available anytime the engine is running, even while welding! Generators provide 20,000 watts continuous power (3-phase) / 12,000 watts continuous power (1-phase).

Low OCV stick (VRD) reduces the open-circuit voltage to 15 volts when the welding power source is not in use. This feature is now built in for increased operator safety without compromising arc start performance.

Welder/generator is warranted by Miller for three years, parts and labor.
Engine is warranted separately by engine manufacturer.

Big Blue® 700X Duo Pro Features

Digital meters with SunVision™ technology enable welding parameters to be viewed with greater clarity than analog meters — at virtually any angle. Meters can be seen clearly even in direct sunlight.

Simple-to-set controls require no elaborate procedure — just select process and weld!

Standard 14-pin receptacle with Auto-Remote Sense™ for simple connection of remote controls and wire feeders.

Simple paralleling switch makes switching from a single operator to dual operators a breeze. Weld up to 400 amps per side when set up in dual-operator mode, or up to 800 amps in single-operator mode.

56.7°C RATED

Miller engine drives are tested to perform in high-temperature climates, even at the highest recorded temperature on earth — 56.7°C*. They are designed to excel in extreme heat by optimizing engine cooling, reducing harmful environmental effects.

*According to the World Meteorological Organization Global Weather & Climate Extremes Archive (<https://wmo.asu.edu/content/world-highest-temperature>)

Arc control is beneficial when welding with stick and solid wires for easier fine-tuning of tough-to-weld materials and out-of-position applications.

Fuel gauge and oil change indicator

Industrial USB port. Quickly upload the latest software and download machine log files to retrieve in-depth information such as diagnostics and machine statistics.

20,000 watts of pure generator power. Plug in an extra Miller® inverter-based power source for a second welding arc!

HD powder coat with zinc-rich primer protects sheet metal from rust and corrosion.

Standard features include ArcReach®, digital preset weld meters, output contactor control, automatic idle, intake manifold heater and oil pan heater.

Big Blue® 700X Duo Pro Technologies

Dynamic DIG™ technology

Ultra-adaptive arc control. Unlike conventional DIG that provides a preset amount of short-clearing current, Miller-exclusive Dynamic DIG technology works on a time-based algorithm that automatically

adjusts the amount of current required to clear a short. Delivers a smoother more consistent arc that can be tailored to match application, material, fit-up and welder technique.

ArcReach® technology

Parameter control at the wire feeder or pendant without needing a control cord.

An ArcReach system allows you to change weld settings from your ArcReach feeder or stick/TIG remote, saving a trip to the power supply. ArcReach technology uses the existing weld cable to communicate welding control information between the feeder or stick/TIG remote and the power source. This technology eliminates the need for control cords, and their associated problems and costs.

ArcReach-equipped power sources work with non-ArcReach accessories; however the ArcReach benefit is only realized with the complete ArcReach system. This includes an ArcReach-equipped machine and one or more of the following accessories:

- ArcReach Smart Feeder
- ArcReach SuitCase feeder
- ArcReach Stick/TIG Remote

See pages 6 and 7 for more information.

Big Blue® 700X Duo Pro Benefits

Easily update technology

With the industrial USB port, you can easily upload the latest software and download machine log files to retrieve in-depth information from your machine such as diagnostics and statistics.

Visit MillerWelds.com/support to download the latest software updates.

Multi-arc welding

Multioperator welding has never been easier or more versatile. One dependable engine, two independent arcs with up to 400 amps each. Or plug in additional inverters for a true multioperator work platform. For example, you can add two XMT® multiprocess machines to allow four

operators to weld with up to 200 amps each. Premium quality arcs allow operators to work independently with no arc interaction.

More arcs provide better fuel economy, improve efficiency and increase profits. You can save about 34 percent with a dual-operator unit versus two single-operator units.

Jobsite safety

Reduce the need to walk back to or climb into the truck bed to make process and parameter changes, or turn your machine on/off. ArcReach® technology provides

parameter control at the wire feeder or stick/TIG remote and optional wireless interface control provides full front panel control in the palm of your hand, so you can lower the risk of encountering potential jobsite hazards.

Function Guide

1. **Self-calibrating digital weld meters with fault code indication** display preset or actual weld parameters.
2. **Weatherproof Lexan® nameplate** is super durable and resists cracking and fading.
3. **Operator controls.** Independent controls for multi-arc welding. “A” controls are for single operator and “B” controls are for a second operator.
4. **Lift-Arc™ TIG with Auto-Stop™.** See descriptions below.
5. **Hot Start™** provides positive stick electrode starts making it easy to start all types of electrodes and it also works great for bead tie-ins.
6. **Great FCAW/MIG performance and arc starts** make the Big Blue® 700X Duo Pro arc the best in its class. Easy to run all wires from .023-inch solid wires to large-diameter 5/64-inch flux-cored wires.
7. **Pushbutton main control knob** used for adjusting amperage/voltage, adjusting arc control, and accessing the service menu.
8. **Adjustable arc control** adjusts DIG when process control is in stick modes and adjusts inductance when process control is in FCAW or MIG modes. The amount of DIG determines how much amperage (heat) varies with stick arc length. Inductance determines the “wetness” of the weld puddle.
9. **USB port** allows software updates from a USB drive. A summary file of recorded data from the unit will be saved to a USB drive that is inserted.
10. **Glow plugs** assist in cold weather starting.
11. **Engine control switch** is used to start engine and then select between auto idle and high speed lock.
12. **Standard 14-pin receptacle** for simple connection of remote controls and wire feeders. Includes **Auto Remote Sense™** which automatically switches from panel to remote amperage/voltage (A/V) control with remote connected. Eliminates confusion of a panel/remote switch.
13. **Weld output terminals**
14. **Separate/parallel switch.** Use switch to select single operator mode (A) or dual operator mode (A/B).
