

Selectarc Ni82

*Basic coated
Nickel base type Electrode*

Classification

AWS A5.11 : ~ENiCrFe-3
Material N° : 2.4648

ISO 14172 : E-Ni 6082 (NiCr20Mn3Nb)

Description & Applications

Basic coated nickel base electrode, with an alloyed core wire, for cladding of low alloyed and alloyed steels, for welding iron- and nickel base alloys and for dissimilar joints. Used for low temperature alloys as well as for high temperature alloys, for service temperatures from -196°C up to 900°C .

Main applications: Construction and repair welding of high strength steels, tool steels, corrosion resistant steels, high temperature and nickel alloys in component manufacturing, furnace construction, cement industry.

Current	(A)	50-70	70-95	90-120	120-160

Redrying 1 h at $250-300^{\circ}\text{C}$. Joints to weld must be clean, exempt from grease, cracks. Guide electrodes with a slight declination, weld with a short arc and prevent a high heat input by applying the stringer bead technique (weaving max. 2-3 times core wire diameter). **Do not preheat Nickel alloy in case of homogeneous assemblies. On high carbon steel assemblies, preheat base material at 200 to 500°C following steel grade to avoid cracks in heat affected zone.**
